

This document contains the new features, changes and fixes implemented in Insight A2.

What's new in v2.3?

Features:

- Group fields to form groups from dimensional items
- The new zoom selection mode allows you to zoom into the selection area
- Quick filter from context menu to exclude individual dimensional items

NOTE: You must uninstall any previous versions of Insight A2 before installing v2.3!

What's new in v2.2.3?

Features:

- Extended binning functionality by supporting bin shifting.
- Enhanced the calculated field functionality.
- Enhanced scale formatting.
- Users are now allowed to add additional text to the numeric scales.
- Scales now support the unabbreviated number format.

Bug fixes:

- The order of details series is now deterministic.
- PowerPoint image exporting now renders image colors correctly.
- Mark details are now exported correctly to Excel.
- Using Microsoft SQL Server and under Italian locale some of the date functions returned incorrect values.
- In certain panel configurations AVG, VAR and STDEV returned incorrect values.
- Date values are now exported to Excel using the user's locale, rather than the one set on the visualization sheets.

Release Notes

Changes:

- Optimized mark drawing code.

NOTE: You must uninstall any previous versions of Insight A2 before installing v2.2.3!
